

Instruction Command Card - Transaction Log

The transaction log function

The transaction log function is used to log the terminal's transactions and send them to the server. In some cases the transaction log should be turned off (like when the functionality is provided by the software).

In this case

In this case the transaction log should be enabled. Please follow the instructions to enable the transaction log.

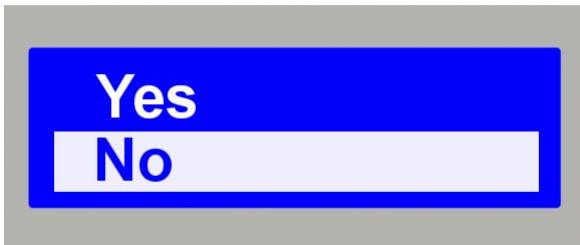

Usage

To use the Command Card place it in the card slot.

The display will show a list with 'Yes' and 'No', the current selection is highlighted.

Enable the Transaction log

- Select 'Yes' to enable the transaction log Use the  'Up' and  'Down' key to navigate in the list.
- Press  'OK' to Confirm ( 'Stop' can be used to cancel).

Disable the Transaction log

- Select 'No' to disable the transaction log Use the  'Up' and  'Down' key to navigate in the list.
- Press  'OK' to Confirm ( 'Stop' can be used to cancel).
