

DB Select

DB Select is a tool to select a PosPRO database in a multi database environment ■

Installation

Installation

Install DBSelect.exe in (for example) c:\Programme\Inepro\DBSelect, and DBSelect.ini in c:\Programme\Inepro\DBSelect\ini.

After starting DBSelect, a database can be selected. Select a database and click [Select]. In the Window the database name will be visible ■

INI File

The most important is the *.ini data. This consists of three parts:

1. [Databases]

DB1=Site 1

DB2=Site 2

DB3=Site 3

2. [Servers]

SVR1=10.0.0.14

SVR2=10.0.0.14

SVR3=10.0.0.14

3. [Registry]

Reg1=IBOS_Site1

Reg2=IBOS_Site2

Reg3=IBOS_Site3

In the database sections you can enter a recognizable name for a site, at the servers enter the IP-address of the database server and at the registry enter the exact name of the catalog ■
