

Grant remote menu access with higher service level

1. Access a PayCon either directly or via the Config Tool with a service card with the required access level.
2. Let the customer enter "+879" on the PayCon. The user will see a code, let him write this down and read it back.
3. Calculate a remote access code; Main Menu > Beheer Acties > service code > Inepro Calculate > <code (this is the code, the customer has written down)>
4. A return code is shown, with this code the customer can log in, with the access level granted by the service card used to access to PayCon generating the remote access code.
