

Introduction

First Time Logon will create manual tags for all users that do not have any tags but do have an email address. Does tags will be created in IBOS and an email with the tag and password will be send to the users email address.

With the manual tag and password, the user is able to log in on an account terminal and register a card tag to his account by logging in with the manual tag and password and presenting the card tag.

Ini

Adapt the setting in the ini file, '0' means disabled, '1' enabled.
